### **Form of Mineral is Critical**

The only way I know to reach the areas ( spinal fluid areas including the brain and some organs) where viruses and bacteria hide from the immune system is with minerals that **cross the blood-brain barrier**, that are effective on the problem and are **water soluble** for proper absorption. Improper forms of minerals can actually be damaging.

### **Bacteria and Viruses Killed BY Silver**

Silver kills viruses and bacteria. It also stops replication. Unlike zinc, silver does not reside in all the fluids that cells call home. For instance, silver is not found in your sweat. After using zinc to put a bacterial or viral infection on hold, I was able to use silver to finish off the flu. Silver has been reported to kill every virus known to man. In fact it has been shown to kill over six hundred and fifty (650) viruses. It has been reported that silver kills viruses due to the valence charge (A Valence charge is a charge on electrons in the outer energy level of an atom ) that surrounds the silver molecule. Silver only kills bacteria that are anaerobic and nitrogen breathing. The friendly anaerobic bacteria in our digestive tract seem to be immune from silver and zinc because they have a different charge and are oxygen breathing. Silver is also used to treat severe burn patients in hospitals. It has been reported that having silver in the bloodstream increases the healing process of fractured bone. Small amounts of silver have been used to preserve food. The human body has no immune system in certain places like your spinal fluid and many major organs. I knew a lady who had a ten year backache. She knew she had a problem in her spinal area because she was in constant pain. She tried everything, including doctors and chiropractors. Then she tried every colloidal silver product on the market with no luck. Then she found a water soluble silver and within two hours after drinking two ounces at one hundred part per million her back pain disappeared. Silver, when in the correct form, can cross the blood-brain barrier. I believe she had an infection in her spinal fluid and the silver reached it.

### **Parasites Killed By Water Soluble Copper**

Copper kills all parasites and intestinal tract worms. There are thousands of different kinds of parasites. Most are microscopic. Others can grow up to ten feet in length. Over 97% of the American people have some microscopic parasites and do not know it. Parasites can lower the immune system by stealing nutrition the body needs and by overtaxing the immune system. Recognizing you affliction is not always easy. Symptoms can be subtle, including an increased risk of cancer, weight gain, weight loss, inability to taste food, allergies, hay-fever, asthma, acne, high blood pressure and mental conditions. One person who had consumed eight ounces of water soluble copper started tasting her food again. A doctor called who was given six weeks to live because of an incurable parasite problem and after drinking one, eight ounce bottle of water soluble copper his parasites died instead of him. When you kill parasites in your body with water soluble copper you may experience a healing crises. This crises is called the Herxheimer reaction, resulting from the decaying parasites. At this point your ammonia levels can climb and flu-like symptoms

### **Drink Lemon Water To Correct The Body's PH and Inhibit Infections**

**Fresh lemon squeezed into 4 to 8 ounces of water each morning; away from food.**

Bacteria, viruses and all cancers are often suppressed if the upper PH is above 6.9 and the lower PH is below 4.0. If you can maintain your respective PH levels, I do not believe it is possible to get the flu, let alone cancer. In other words, your upper PH must stay high and your lower PH must stay low. As you go through your day, think and work hard, both of your PHs will constantly move towards each other. If you don't get enough rest or eat the right kind of food your two PH levels will move towards each other and as they enter the middle danger zone your resistance will go down and you become more susceptible to flu, parasites, bacteria, cancers and many other diseases.

### **Stop Bacterial and Viral Replication With Zinc**

Zinc stops bacterial and viral replication. This means they cannot reproduce. One important point is that zinc only interferes with anaerobic, nitrogen breathing bacteria. This is why a person who has the flu can consume zinc and get over the flu faster. Even though zinc does not kill pathogens upon contact a person can use zinc to slow down or freeze a cold in its tracks, so it cannot proceed with standard severity. Because zinc moves through all the fluids of the body it can create a defense against infections that are trying to enter the body. For instance, if you had zinc in your spit you could stop bacteria replication in your mouth, which in turn could stop bacteria from producing acids that dissolve tooth enamel.

### **Parasites Passed From Mother To Fetus**

Because microscopic parasites travel in the bloodstream and are passed from mother to baby through the placenta, some families have had human hosts to the parasite(s) in their family tree for generations.
